

The
Backrail
Cantilever System

The **Backrail**
Cantilever System

For gate up to 15 metres/1900 kg.

All **19 mm thick** steel rollers with double bearing guarantee a high capacity for gates **up to 1900Kg**

Lateral support nylon rollers with **double bearing** and **high quality** material for **temperature up to 80°C**

10mm thick **hot dipped galvanised** front base plate

Front base with strong **central pivot** pin made of high quality **hardened steel**

All screws and nuts have a **delta protekt** surface teatment for a **high protection**

All backrail system is made with **10 mm thick steel plates**

The Backrail

Cantilever System

Backrail is a complete kit appropriately designed and created to build cantilever sliding gates quickly and easily.

The high quality of the materials combined with an accurate design make it suitable for a wide range of openings from 5 to 15 meters with a maximum weight of up to 1900kg.

Front base plate
with 4 steel rollers

Adjustable front
base plate

Roller box suitable for 200x100 and
150x100 backrail RHS.

Adjustable rear
base plate

The Backrail Cantilever System

Bolt-on installation

Roller box design allows for either weld on or bolt on configurations.

The bolt-on version allows for ease of replacement if necessary.

The Backrail Cantilever System

Weld-on installation

Roller box design allows for either weld on or bolt on configurations.

The weld-on version reduces the space between gate and tubular backrail.

The Backrail Cantilever System

Roller box is integrated with adjustable nylon guide rollers to maintain gate tracking and performance.

- Backrail system accommodates both 150 x 100mm and 200 x 100mm backrail RHS.
- This is achieved by changing the position of the upper roller.

- Hot dipped galvanised front base plate is laser cut to accommodate double post, and fitted with 4 x heavy duty steel rollers on a pivoting cradle system .
- The quality of the materials and bearings used guarantees a high load capacity which makes the system suitable for gates up to 1900Kg.

The kit Includes 4 x lateral side support rollers with mounting brackets to ensure accurate gate tracking.

- The Kit is supplied with weld on front and rear foundation base plates to suit backrail RHS.
- Large slotted holes in the backrail baseplates provide side adjustment to the backrail RHS. Vertical adjustment and levelling is achieved with the threaded rod.
